

RETROSPECTIVE

What Went Well	
Tasks were defined and allocated well	Everyone contributed
The prototype was finished on time	Good group work despite remote work

Improvement	
What needs to be improved	How to improve
Poor use of git during sprint, team must use git to collaborate	Members should commit more frequently , not just commit when everything is done.
The use of the git branch should be improved.	
Should not have multiple files for product backlog	The team should use Trello for the product backlog.
Ad-hoc meetings are clashing with team members schedule	The team should agree on one meeting scheduled every week.
Clearer communication must be done between members	
Sprint 1 was slightly extended beyond the expected sprint duration	
Should take more user stories if stories are not hard to implement during a sprint	
Lack of an integrated time tracking system	Make a new docs to track time, instead of cramping the whole thing in trello.
